5.Use the following requirements for a Library Management System:

- Add a feature to search books by title and author.
- Implement an online book reservation system.
- Generate monthly reports on borrowed books for administrators.
- Enable email notifications for overdue books.
- Add support for QR code scanning for borrowing and returning books.
- Create a user-friendly dashboard for librarians.
- Allow users to review and rate books.
- Integrate a chatbot for user assistance.
- Develop a mobile app version of the system.
- Provide multi-language support.

Categorize each requirement using MOSCOW Method (Must-Have, Should-Have, Could-Have, or Won't-Have) based on the following criteria:

- Impact on the users and stakeholders.
- Feasibility considering time, budget, and resource constraints.

Finally Submit the completed Google Sheet or Excel file with all requirements categorized and justified.

S.No	Requirement	Impact (High/Med/Low)	Feasibility (High/Med/Low)	MoSCoW Category	Justification
1	Search books by title and author	High	High	Must-Have	Core function. Users cannot find books without it, and it is easy to build with a database query.
2	Online book reservation	High	Medium	Should-Have	Saves users' time, but the library can run without it at first. Needs extra logic for queues and holds.
3	Monthly reports on borrowed books	Medium	High	Should-Have	Helps administrators plan and track usage. Easy to generate from existing data, but not needed on day one.
4	Email notifications for overdue books	High	High	Should-Have	Reduces late returns and improves service. Needs an email service but is simple to set up.
5	QR code scanning for borrow/return	Medium	Medium	Could-Have	Speeds up the process, but needs scanners or cameras and extra setup. Manual entry works meanwhile.
6	User-friendly librarian dashboard	High	High	Must-Have	Librarians use the system daily to manage books and members, so it is essential.
7	Users can review and rate books	Low	High	Could-Have	Improves engagement but does not affect core operations. Easy to add later.
8	Chatbot for user assistance	Low	Low	Must-Have	Needs AI or NLP development, which is costly and time-consuming. Users can ask the librarian instead.
9	Mobile app version	High	Low	Must-Have	Useful, but it is a separate product needing extra developers, time and budget. Planned for a future release.
10	Multi-language support	Medium	Medium	Could-Have	Helpful for diverse users, but not essential. It needs translation effort and can come after launch.
